

RF Coagulation TREATMENT FOR HEMORRHOID

A safe and Reliable
hemorrhoid
treatment with
lasting results.

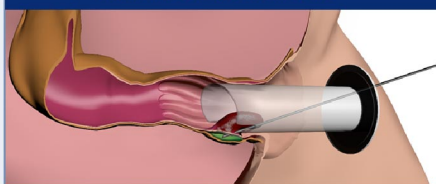

This procedure treats all the grades of hemorrhoids in a walk in walk out setting, requiring only local anesthetics, which benefits both the patient and the hospital. This safe and reliable treatment is now available and utilizes established radio frequency technology. This procedure is generally concluded within a few minutes, with minimal discomfort for the patient enabling immediate return to normal daily activities.

4 STEP PROCEDURE

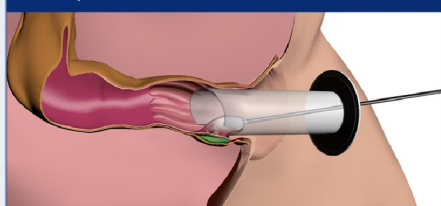

1 Insert the anoscope in rectum of the patient to see the hemorrhoid.

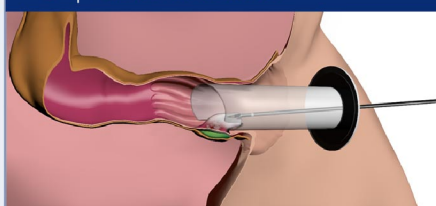

2 Apply local anesthesia in the muscle layer under the hemorrhoid. NOT in the hemorrhoidal tissue.

3 Insert the probe in the hemorrhoid and apply the Radio Frequency energy.

4 Apply the RF energy to the surface of the hemorrhoid.

ADVANTAGES FOR THE PATIENT

- > 15-minute walk in walk out procedure
- > Local anesthesia
- > Minimal post-operative pain and care
- > Can be used to treat all grades of hemorrhoids
- > Immediate return to daily activities

Necrotic tissue becomes exfoliated and a wound is formed at former hemorrhoid site.

4 weeks post treatments; this area will become a scar or become covered with mucus membrane.
